Nutrition and Dietetics Composition Studies, Gainful Employment Disclosure

Employment data for Class of 2017:
- 14/16 were employed by 4 months (October) following graduation.
- Employment rate 14/16 = 88%.
- By January 2018, 94% were employed.
- Response rate 94% (15/16)

Placement Rate Methodology: Interns were asked to inform the program director when they became employed. We asked for month of employment, the area of dietetics (Community, clinical, food systems etc.) if it was full or part-time (if part time was what they wanted) and where the job is and when they got the job. ACEND asks about employment rates at 4 months, 6 months and 1 year and then confirms data one year out. We count jobs within the field of study only. Graduating interns also receive a reminder usually in September and October to remind them that the information is needed. We discuss the need for this data just before they graduate. Most interns are very conscientious about letting us know what is going on with them.
